Picture View

1. Overview and Operation

Overview

This demo project introduces how to use Picture View object. This object plays slideshow of picture files. The user can save the operation procedure or maintenance instructions into pictures to enable on-site operators to perform tasks efficiently.

Operation

When the [USB disk] in which the picture files are saved in the [root directory] is inserted to HMI, the system will automatically load the picture files based on the settings of Picture View object.

2. Setting up the Screen

Step 1.   Create a Picture View object and select the [Toolbar position]. If [Hide delete button] is selected, the delete button will not be displayed on the Picture View object toolbar. The delete button is used to delete the picture currently viewed.

Step 2.   Select the file position and the directory where the picture files are saved. In this demo project, the file position is set to [USB disk] and the directory is set to [Root directory].
