Product Warranty (1 years)

IFC warrants to you, the original purchaser, that each of its products will be free from defects in materials and workmanship for one years from the date of purchase.

This warranty does not apply to any products which have been repaired or altered by persons other than repair personnel authorized by IFC, or which have been subject to misuse, abuse, accident or improper installation. IFC assumes no liability under the terms of this warranty as a consequence of such events.

Because of IFC's high quality-control standards and rigorous testing, most of our customers never need to use our repair service. If an IFC product is defective, it will be repaired or replaced at no charge during the warranty period. For out of warranty repairs, you will be billed according to the cost of replacement materials, service time and freight. Please consult your dealer for more details.

If you think you have a defective product, follow these steps:

1. Collect all the information about the problem encountered. (For example, CPU speed, IFC products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages you get when the problem occurs.

2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.

3. If your product is diagnosed as defective, obtain an RMA (return merchandise authorization) number from your dealer. This allows us to process your return more quickly.

4. Carefully pack the defective product, a fully-completed Repair and Replacement Order Card and a photocopy proof of purchase date (such as your sales receipt) in a shippable container. A product returned without proof of the purchase date is not eligible for warranty service.

Declaration of Conformity

FCC Class A

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC part15, CE E50252E, GB9254 Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Technical Support and Assistance

1. Visit the IFC web site at <u>www.ifc-ipc.cn</u> where you can find the latest information about the product.

2. Contact your distributor, sales representative, or IFC's customer service center for technical support if you need additional assistance. Please have the following information ready before you call:

- Product name and serial number
- Description of your peripheral attachments
- Description of your software (operating system, version, application software, etc.)
- A complete description of the problem
- The exact wording of any error messages

Warnings, Cautions and Notes

Warning!

Warnings indicate conditions, which if not observed, can cause personal injury!

Caution!

Cautions are included to help you avoid damaging hardware or losing data.

Note! Notes provide optional additional information.

Safety Instructions

1. Read these safety instructions carefully. Keep this User Manual for later reference.

2. Disconnect this equipment from any AC outlet before cleaning. Use a damp cloth. Do not use liquid or spray detergents for cleaning.

4. For plug-in equipment, the power outlet socket must be located near the equipment and must be easily accessible.

5. Keep this equipment away from humidity.

6. Put this equipment on a reliable surface during installation. Dropping it or letting it fall may cause damage.

7. The openings on the enclosure are for air convection. Protect the equipment from overheating. Do not cover the openings.

8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.

9. Position the power cord so that people cannot step on it. Do not place anything over the power cord.

10. All cautions and warnings on the equipment should be noted.

11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient overvoltage.

12. Never pour any liquid into an opening. This may cause fire or electrical shock.

13. Never open the equipment. For safety reasons, the equipment should be opened only by qualified service personnel.

14. If one of the following situations arises, get the equipment checked by service personnel:

The power cord or plug is damaged.

Liquid has penetrated into the equipment.

The equipment has been exposed to moisture.

The equipment does not work well, or you cannot get it to work according to the user's manual.

The equipment has been dropped and damaged.

The equipment has obvious signs of breakage.

15. Do not leave this equipment in an environment where the storage temperature may go below -20° c $(-4^{\circ}$ f) or above 60° c $(140^{\circ}$ f). This could damage the equipment. The equipment should be in a controlled environment.

16. Caution: danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer, discard used batteries according to the manufacturer's instructions.

17. Caution: Any unverified component could cause unexpected damage. To ensure the correct installation, please always use the components (ex. Screws) provided with the accessory box.

18. Caution: The computer is provided with a battery-powered real-time clock circuit. There is a danger of explosion if battery is incorrectly replaced. Replace only with same or equivalent type recommended by the manufacture. Discard used batteries according to the manufacturer's instructions. 19. Caution: Always completely disconnect the power cord from your chassis whenever you work with the hardware. Do not make connections while the power is on. Sensitive electronic components can be damaged by sudden power surges The sound pressure level at the operator's position according to IEC 704-1:1982 is no more than 70 dB (A).

Disclaimer: This set of instructions is given according to IEC 704-1. IFC disclaims all responsibility for the accuracy of any statements contained herein.

Packing list

Before installation, please ensure the following items have been shipped: 1 x IFC-BOX4000 BOX PC

AC-DC adapter, DC 19V@4.7A 90W, with 5.08mm JACK, $0 \sim 45$ °C, a perfect solution for home and office application.

General Introduction

This chapter gives background information on IFC-BOX4000 series.

IFC-BOX4000 User Manual

1.1 Introduction

The fanless embedded computer IFC-BOX4000 is an ideal solution for ready-to-use system applications. All electronics are protected in a compact, sealed aluminum case. It offers anti-vibration and dustproof as well as passive cooling solution making it a convenient & flexible solution for customers embedding in their own cabinet, or to use it as a stand-alone system, thereby meeting the requirements of limited space and harsh environment.

IFC-BOX4000 is designed as a palm-size fanless embedded system and occupies only 260 x 176 x 49 mm 260 x 176, The rugged, cast aluminum case not only provides great protection from EMI, shock/vibration, cold and heat, but also provides passive cooling for quiet, fanless operation. IFC-BOX4000 supports DVI-I+DP three synch. Or asynch. display, 4 x GbE LAN, 2 x USB 2.0, 2 x USB 3.0 and 4 x RS-232, 2 x RS-485, 2.5" SATA HDD, m-SATA SSD, DC +7V~30V extended power supply.

1.2 Features

Key features

- Extremely compact, sealed architecture, fanless design and low power consumption system
 - Support Intel® Haswell[™] Celeron® Processor 2957U 1.4GHz Dual core CPU Intel Haswell Core4 I3-4030U-1.9GHz CPU Intel Haswell Core4 I5-4278U-3.1GHz CPU Intel Haswell Core4 I7-4578U-3.5GHz CPU
 - Ultra-slim handheld system, support 2.5" SATA HDD/M-SATA SSD
 - DVI-I/DP dual synch. & asynch. display, support 4K resolution
 - 4 x GbE LAN, 2x USB 2.0, 2x USB 3.0, 4 x RS-232, 2 x RS-232 / Isolation RS-485
 - Support VESA/ Desktop installation

1.3 Specifications

1.3.1 General

CPU: Intel® Haswell™ Celeron® Processor 2957U 1.4GHz Dual Core CPU,

Intel Haswell Core4 I3-4030U-1.9GHz CPU

- Intel Haswell Core4 I5-4278U-3.1GHz CPU
- Intel Haswell Core4 I7-4578U-3.5GHz CPU

System Chipset: Intel® Haswell™ SOC chipset

BIOS: AMI 16 Mbit Flash BIOS

System Memory: SODIMM socket, DDR3L-1333/1600 ; LPDDR3-1333/1600, Support Max. 16GB

Watchdog Timer: 255-level interval timer, setup by software

Serial Ports:

- 2 x RS232/RS485 jumper setting, RS485 supports software flow control;
- 4 x RS232 , Support 3000V Surge protection;

USB:

- 2 x USB 2.0
- 2 x USB 3.0

Audio: High definition auto encoding

- - Realtek ALC6622 audio card, with MIC/audio output

Expansion Bus: Support 1 x full-size Mini-PCIe, 3G UIM card, 1 x Half length-size Mini-PCIe

Storage: Support Msata SSD or 1* 2.5"SATAIII HDD (9.5 mm)

1.3.2 Display

- Chipset: Intel® HD Graphics,200-1GHz frequency
- DVI-I/DP dual synch. & asynch. Display
- Resolution: support Max. 4K resolution

1.3.3 Ethernet

Chipset: Intel® I210 GbE LAN

Speed: 10/100/1000 Mbps, suppot Wake-on-Lan

Connector: 4 x RJ45

Standard: Compliant with IEEE 802.3, IEEE 802.3u, IEEE 802.3x, IEEE 8023y, IEEE 802.ab.

1.3.4 Electrical Specifications

- Power Input: DC +9V ~ +30 V
- Power On Type: AT / ATX Jumper selection
- APM: ACPI 3.0, APM
- Power Adapter: AC ~ DC 12V/3A , 36W
- Power consumption:

Voltage		2957U-1.4GHz (Fanless)	
Volta	voltage		Power
Idle mode	+12V	0.5	6

Power on	+12V	1.1	13.2
Max load	+12V	1.7	20.4

- Power consumption test conditions:
 - Test Condition: Windows 7 professional Professional, Burntest ver5.3, 32G SSD
 - Idel Mode: The power consumption without running any application software after entering to Windows system.
 - Boot Mode: The max. Power consumption between power-on and entering to system process.
 - Full-load Mode: The power consumption under 100% full-load operation of CPU and graphic card when running Burntest.
- RTC battery: Lithium 3 .3V/210mAH CR2032 battery

1.4 OS Support

It supports Support Win7, Win8, Win CE 6.0, and Linux Ubuntu 10.04 UP.

1.5 Other

- Power switch, power indicator
- 1 -255 sec. watchdog
- 12 bits, support routine, self-define I/O, 3.3V@24mA IFC-BOX4000 User Manual

1.6 Environmental Specifications

Operating temperature:

-20 ~ 60° C (extended temp. SSD/mSATA device)

0 ~ 40° C (HDD)

Relative humidity: 95% @ 40°C (non-condensing)

Storage temperature: -40 ~ 85°C (-40 ~ 185°F)

Vibration loading during operation:

- With SSD: 3 Grms, IEC 60068-2-64, random, 5 ~ 500 Hz, 1 hr/axis

Shock during operation:

- With SSD: 30 G, IEC 60068-2-64, half sine, 11 ms duration time.

Safety: In compliance with UL,CCC

EMC: CE, FCC A, ROSH certificate

1.7 Mechanical Specifications

Figure 1.7 IFC-BOX4000 mechanical dimension drawing

H/W Installation

This chapter explains the setup procedures of the IFC-BOX4000 hardware, including instructions on setting jumpers and connecting peripherals, switches and indicators. Be sure to read all safety precautions before you begin the installation procedure.

2.1 Jumpers

2.1.1 Jumper Description

Board can be configured by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To close a jumper, you connect the pins with the clip. To open a jumper, you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

The jumper settings are schematically depicted in this manual as follows.

A pair of needle-nose pliers may be helpful when working with jumpers. If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any changes.

Generally, you simply need a standard cable to make most connections.

Warning! To avoid damaging the computer, always turn off the power supply before setting jumpers.

How to verify Pin1 of the jumper?

1. Please check the M/B carefully, where there is a mark of "1" or white thick line, there is Pin1.

2. Look into the pad on the back side of the M/B, generally the square side of the pad is Pin1.

2.1.2 IFC-BOX4000 Installation

Unscrew pan head fixed chassis around 8 M2.5, remove the lower cover of the computer case can be carried out from the bottom, hard disk, M-SATA, memory, Mini-PCIe equipment installation. And can be set up to the corresponding functional jumper

9	SSTX+		
S1	GND	S2	GND
S3	GND	S4	GND

1. 2 x USB, all support PNP & hot-plug functions. USB ports are in compliance with USB UHCI, Rev. 3.0 standard. It can connect max. 127 external devices.

2. USB port provides max. 1A current load capacity.

USB2.0

 Part Number

 Description
 Double USB Port AF90° 12Pin DIP

Pin	Signal	Pin	Signal
1	USB_VCC	2	USB_PORT2#
3	USB_PORT2	4	GND
5	USB_VCC	6	USB_PORT3#
7	USB_PORT3	8	GND
9	CHASSIS_USB	10	CHASSIS_USB
11	CHASSIS_USB	12	CHASSIS_USB

1. The 1 provides 2 USB interface, support plug and play and the hot swap function, can be up to 127 external connection equipment. USB interface with USB UHCI, the Rev. 2 standard. The USB interface supports plug and play function, allows to connect or disconnect the device of the user at any time, without having to shut down the computer.

2. USB ports to provide maximum 1A current load capacity.

Ethernet

Part Number

Description

RJ45 Port 8PIN DIP

Pin	Signal	Pin	Signal
1	Transmit Data+	2	Transmit Data-
3	Receive Data+	4	Bi-directional Data+
5	Bi-directional Data-	6	Receive Data-
7	Bi-directional Data+	8	Bi-directional Data-

IFC-BOX4000 provides 4 POE RJ45 LAN port, in full compliance with the IEEE 802.3u 10/100/1000 Base-T CSMA/CD standard. RJ-45 connector using standard Ethernet port, support 48V@500mA POE power output, Link/Speed LED lights, for indicating transmission / connection state and speed condition.

<u>AUDIO</u>

BIOS Settings

3.1 BIOS Overview

BIOS (Basic Input and Output System) is solidified in the flash memory on the motherboard. Main functions including: initialize system hardware, set operating status of the system components, adjust operating parameters of the system components, diagnose the functions of the system components and report failures, provide hardware operating and controlling interface for the upper level software system, guide operating system etc.. BIOS provides users with a parameters for users, control power management mode and adjust the resource distribution of system device.

Enter BIOS Setup

After powering on the system, press or <ESC> to enter BIOS setup when see post logo or post message

The available keys for the Menu screen are

- Select Menu: $< \leftarrow >$ or $< \rightarrow >$
- Select Item: < ↑> or < ↓>
- Select Field: <Tab>
- Change Fielsssd: <+> or <->
- Help: <F1>
- Load Defaults <F3>
- Save & Exit: <F4>
- Exits the Menu: <Esc>

NOTE!

BOIS setting will affect computer performance directly. Improper parameter setting would cause damage to the computer; it may even unable to power on. Please use internal default value of BIOS to restore the system. Our company is constantly updating BIOS, so the setup interface may varies sometimes. The default options below are just for reference only.

	anumiatit (0) 0040 Anomiaan	Mastatuanda Tua
version 2.15.1236. U	opyright (C) 2012 American	megatrends, Inc.

- Legacy USB support:
 - 1. Enables support for legacy USB keyboard.
 - 2. Auto option disables legacy support if no USB devices are connected.
 - 3. DISABLE option will keep USB devices available only for EFI applications.
- USB3.0 Support: Enable/Disable USB3.0 (XHCI) Controller support.
- XHCI Hand-off:
 - 1. This is a workaround for OSes without XHCI hand-off support.
 - 2. The XHCI ownership change should be claimed by XHCI driver.
- EHCI Hand-off:
 - 1. This is a workaround for OSes without EHCI hand-off support.
 - 2. The EHCI ownership change should claim by EHCI driver.
- USB Mass Storage Driver Support: Enable/Disable USB Mass Storage Driver Support.
- USB transfer time-out: The time-out value for Control, Bulk, and Interrupt transfers.
- Device reset time-out :USB mass storage device Start Unit command time-out.
- Device power-up delay: Maximum time the device will take before it properly reports itself to the Host Controller.

3.3.5 Super IO Configuration

Aptio Setup Utility – (Advanced	Copyright (C) 2012 American	Megatrends, Inc.
IT8782F Super IO Configuration		Set Parameters of Serial Port
<pre>IT8782F Super IO Chip > Serial Port 1 Configuration > Serial Port 2 Configuration > Serial Port 3 Configuration > Serial Port 4 Configuration > Serial Port 5 Configuration > Serial Port 6 Configuration</pre>	IT8782F

 Save Changes and Reset 	

- This item allows you to reset the system after saving the changes.
- Discard Changes and Reset
 This item allows you to rest system setup without saving any changes.
- Save Changes This item allows you to save changes done so far to any of the options.
- Discard Changes This item allows you to discard changes done so far to any of the options.
- Restore Defaults
 - This item allows you to restore/load default values for all the options.
- Save as User Defaults This item allows you to save the changes done so far as user defaults.
- Restore User Defaults
 This item allows you to restore the user defaults to all the options.
- Boot Override

S/W Introduction & Installation

4.1 S/W Service Introduction

ICS provides software services as bellow:

4.2 Watchdog program example

A watchdog timer (abbreviated as WDT) is a hardware device which triggers an action, e.g. rebooting the system, if the system does not reset the timer within a specific period of time. The WDT program example provides developers with functions such as starting the timer, resetting the timer, and setting the timeout value if the hardware requires customized timeout values.

Please contact our service personnel for program example source code and packaging EXE executable file.

4.2.1 WDT Programming Model

You can use the tool WDT.exe under DOS to test the watchdog function.

Usage: WDT -? : Show help screen WDT -S Value: Set Watchdog as seconds mode, and Value is the time WDT -M Value: Set Watchdog as minutes mode, and Value is the time Example: WDT -S 5 : Set Watchdog as 5 seconds WDT -M 2 : Set Watchdog as 2 minutes

4.3 GPIO program example

A GPIO is a pin that can be used as input or output, when used as output, you can set it output as low or high.

Please contact our service personnel for program example source code and packaging EXE executable file.

You can use the tool GPIO.exe under DOS to test whether the pin can be used as a GPIO.

Usage:

GPIO -?: Show help screenGPIO -IGpio Num : Set GPIO Port as inputGPIO -OHGpio Num : Set GPIO Port output highGPIO -OLGpio Num : Set GPIO Port output Low

Example: GPIO -I 1 : Set GPIO 1 as input GPIO -OH 1 : Set GPIO 1 output high GPIO -OL 1 : Set GPIO 1 output Low
