1. Overview and Operation

Speed Dome Camera

[Overview]

This demo project is to display how to use macro to write PELCO-D protocol and use free protocol driver for controlling speed dome camera.

{Note} This function can only be applied to X Series HMI that support Video Input objects.

[Operation]

The buttons on screen are for moving the camera lens up, down, left, right or to zoom in / out.

The screenshot shows a control interface for a speed dome camera. The central display shows a street scene with cars and buildings. Surrounding the display are various control buttons: directional arrows (up, down, left, right) for panning, zoom in (+) and zoom out (-) buttons, and a vertical list of numbers 1 through 8 for preset positions. There are also 'Set' and 'Goto' buttons. Callouts provide detailed instructions for each set of controls.

Move the camera lens to the left in normal speed or rapidly, or to zoom in /out.

Move the camera lens up in normal speed or rapidly.

Move the camera lens to the right in normal speed or rapidly.

Move the camera lens down in normal speed or rapidly.

1. Set the position of the lens, press [1] and press [Set], the lens will move to position 1 where preset. 8 positions can be preset.
2. Press one of the numbers 1~8 then press [Goto]; the lens will be moved to the preset position.

The lens can also be moved by touching the image display zone.

Press area A, the lens will move to the upper left.

Press area B, the lens will move upwards.

Press area C, the lens will move to the upper right.

Press area D, the lens will move to the left.

Press area E, the lens will move to the right.

Press area F, the lens will move to the lower left.

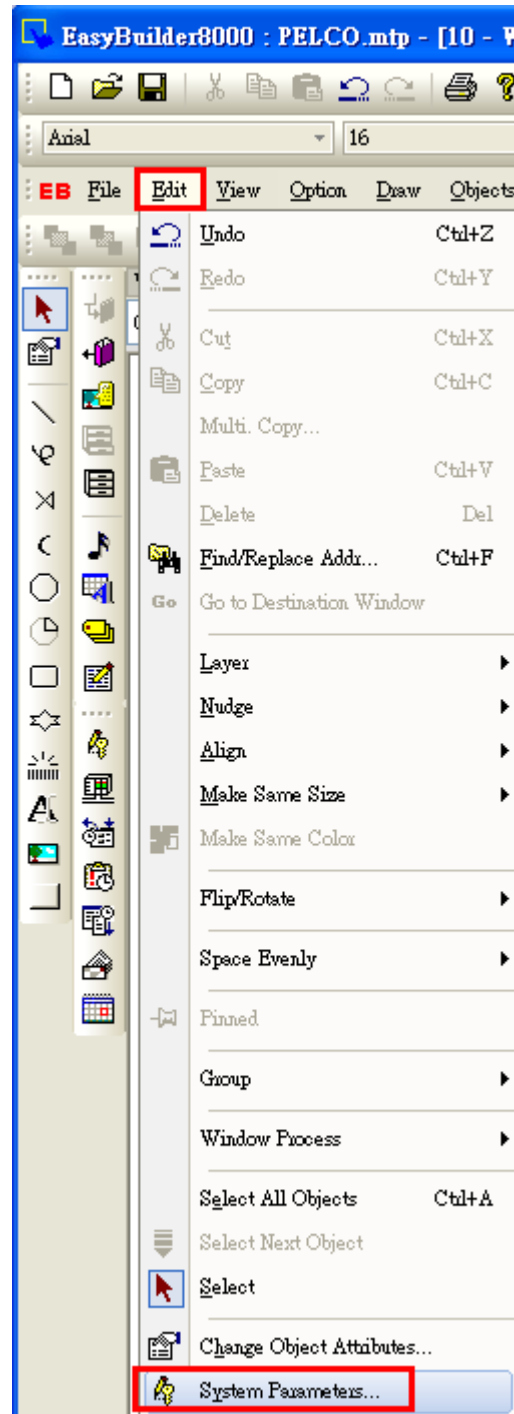

Press area G, the lens will move downwards.

Press area H, the lens will move to the lower right.

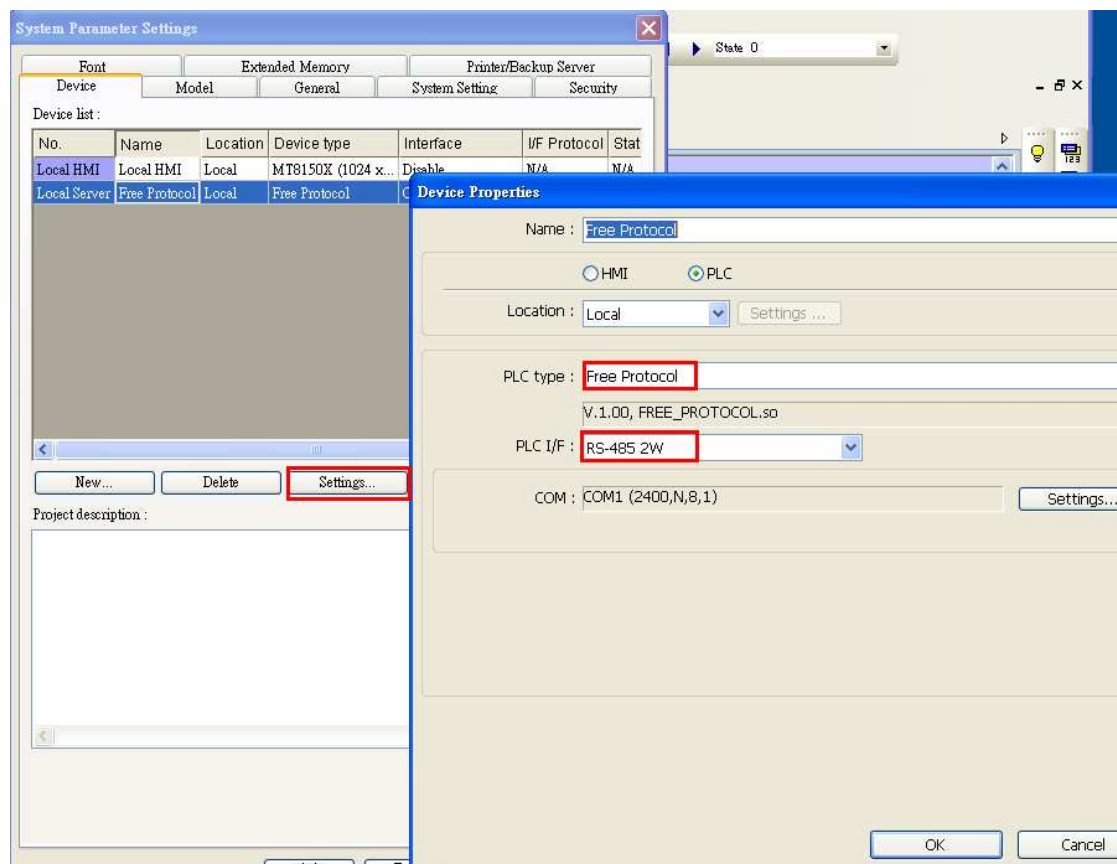

2. Setting up the screen

Set this feature in the project file as follow.

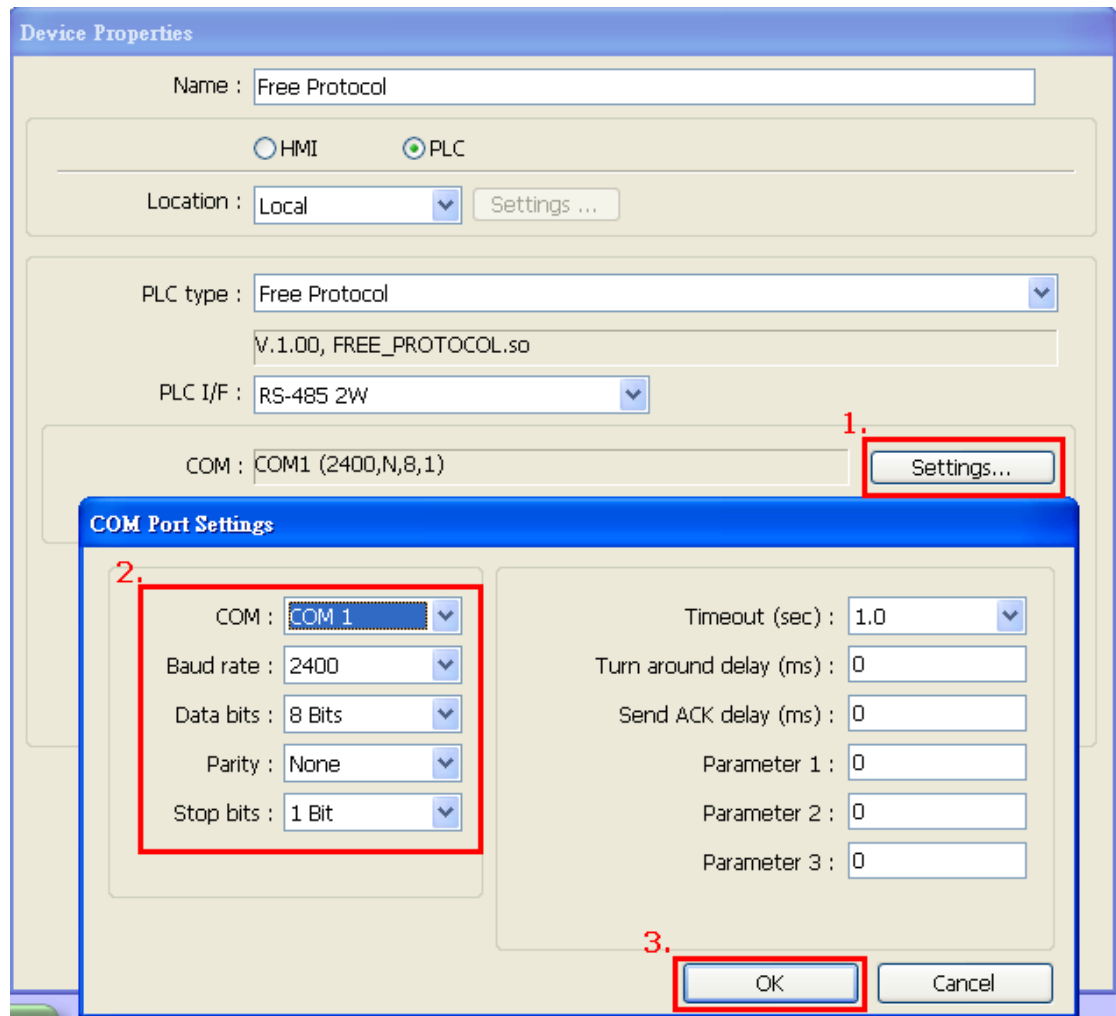

2-1 In the Edit area, click "System Parameters".

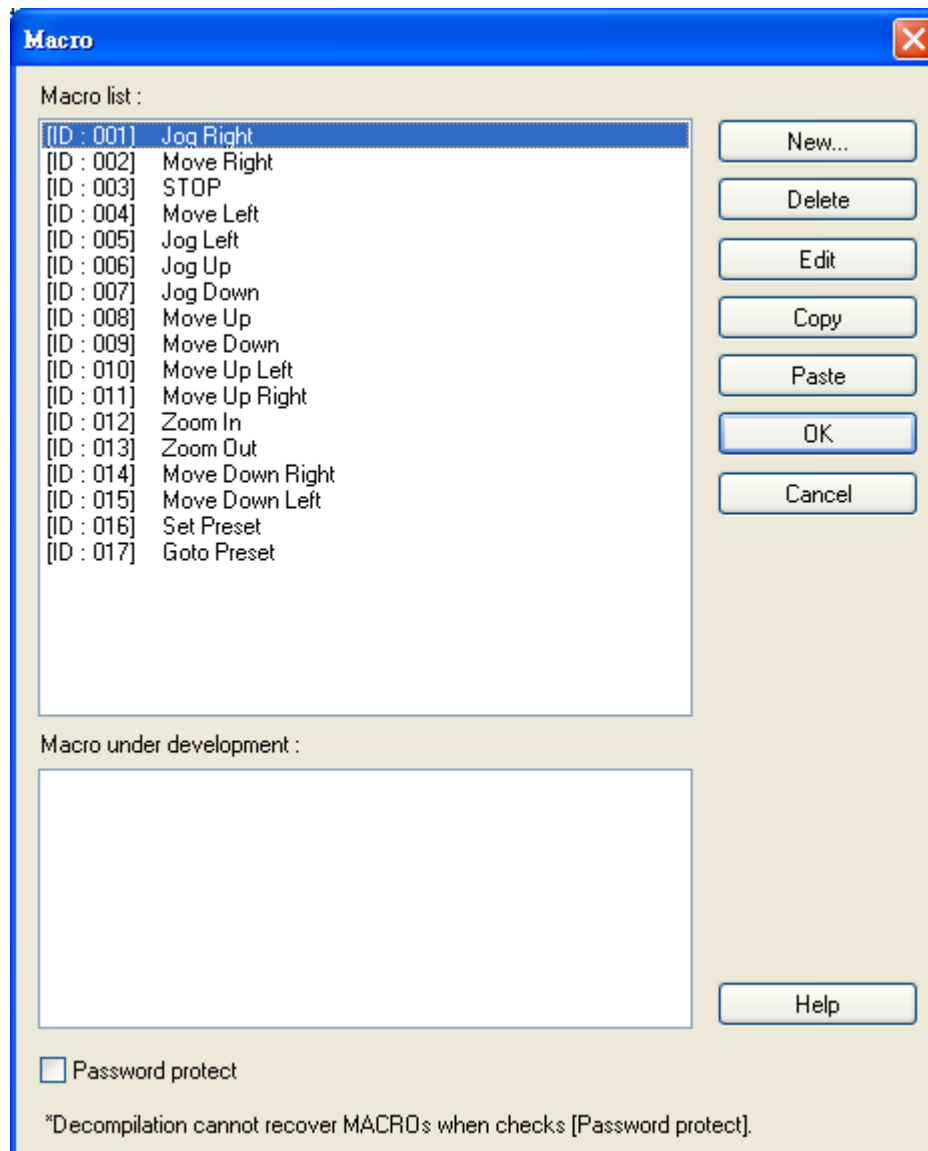

2-2 Click [Settings] and Device Properties dialogue appears. Select [Free Protocol] driver in PLC type and select [RS485 2w] in PLC I/F.

2-3 Click [Settings] and Com Port Settings dialogue appears. Set the parameters and then click [OK] to exit.

2-4 Write macro for PELCO-D protocol to control the camera.

2-5 Set PLC Control objects for triggering macros.

- 1 : [Local HMI : LB-0] => Execute macro program : [ID:002] Move Right (OFF->ON)
- 2 : [Local HMI : LB-0] => Execute macro program : [ID:003] STOP (ON->OFF)

While clicking on the screen, PLC Control 1&2 will execute macro ID:002&003

- 3 : [Local HMI : LB-1] => Execute macro program : [ID:004] Move Left (OFF->ON)
- 4 : [Local HMI : LB-1] => Execute macro program : [ID:003] STOP (ON->OFF)

While clicking on the screen, PLC Control 3&4 will execute macro ID:004&003

- 5 : [Local HMI : LB-2] => Execute macro program : [ID:008] Move Up (OFF->ON)
- 6 : [Local HMI : LB-2] => Execute macro program : [ID:003] STOP (ON->OFF)

While clicking on the screen, PLC Control 5&6 will execute macro ID:008&003

- 7 : [Local HMI : LB-3] => Execute macro program : [ID:009] Move Down (OFF->ON)
- 8 : [Local HMI : LB-3] => Execute macro program : [ID:003] STOP (ON->OFF)

While clicking on the screen, PLC Control 7&8 will execute macro ID: 009&003

- 9 : [Local HMI : LB-5] => Execute macro program : [ID:012] Zoom In (OFF->ON)
- 10 : [Local HMI : LB-5] => Execute macro program : [ID:003] STOP (ON->OFF)

While clicking on the screen, PLC Control 9&10 will execute macro ID:012&003

- 11 : [Local HMI : LB-6] => Execute macro program : [ID:013] Zoom Out (OFF->ON)
- 12 : [Local HMI : LB-6] => Execute macro program : [ID:003] STOP (ON->OFF)

While clicking on the screen, PLC Control 11&12 will execute macro ID:013&003

- 13 : [Local HMI : LB-7] => Execute macro program : [ID:010] Move Up Left (OFF->ON)
- 14 : [Local HMI : LB-7] => Execute macro program : [ID:003] STOP (ON->OFF)

While touching the upper left side of the screen, PLC Control 13&14 will execute macro ID:010&003

- 15 : [Local HMI : LB-8] => Execute macro program : [ID:011] Move Up Right (OFF->ON)
- 16 : [Local HMI : LB-8] => Execute macro program : [ID:003] STOP (ON->OFF)

While touching the upper right side of the screen, PLC Control 15&16 will execute macro ID:011&003

- 17 : [Local HMI : LB-9] => Execute macro program : [ID:015] Move Down Left (OFF->ON)
- 18 : [Local HMI : LB-9] => Execute macro program : [ID:003] STOP (ON->OFF)

While touching the lower left side of the screen, PLC Control 17&18 will execute macro ID:015&003

- 19 : [Local HMI : LB-10] => Execute macro program : [ID:014] Move Down Right (OFF->ON)
- 20 : [Local HMI : LB-10] => Execute macro program : [ID:003] STOP (ON->OFF)

While touching the lower right side of the screen, PLC Control 19&20 will execute macro ID:014&003

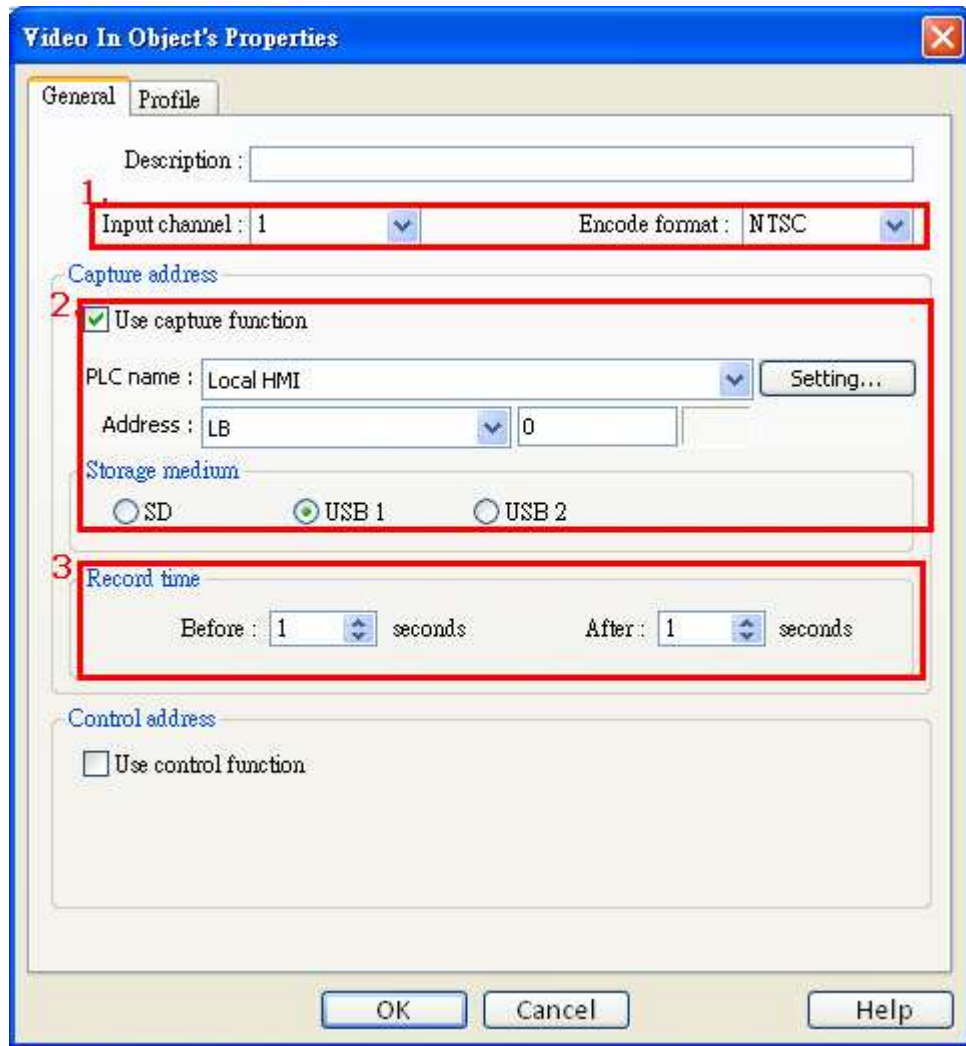

2-6 Create a Video In object.

Set "1" in [Input channel]

Encode format: NTSC

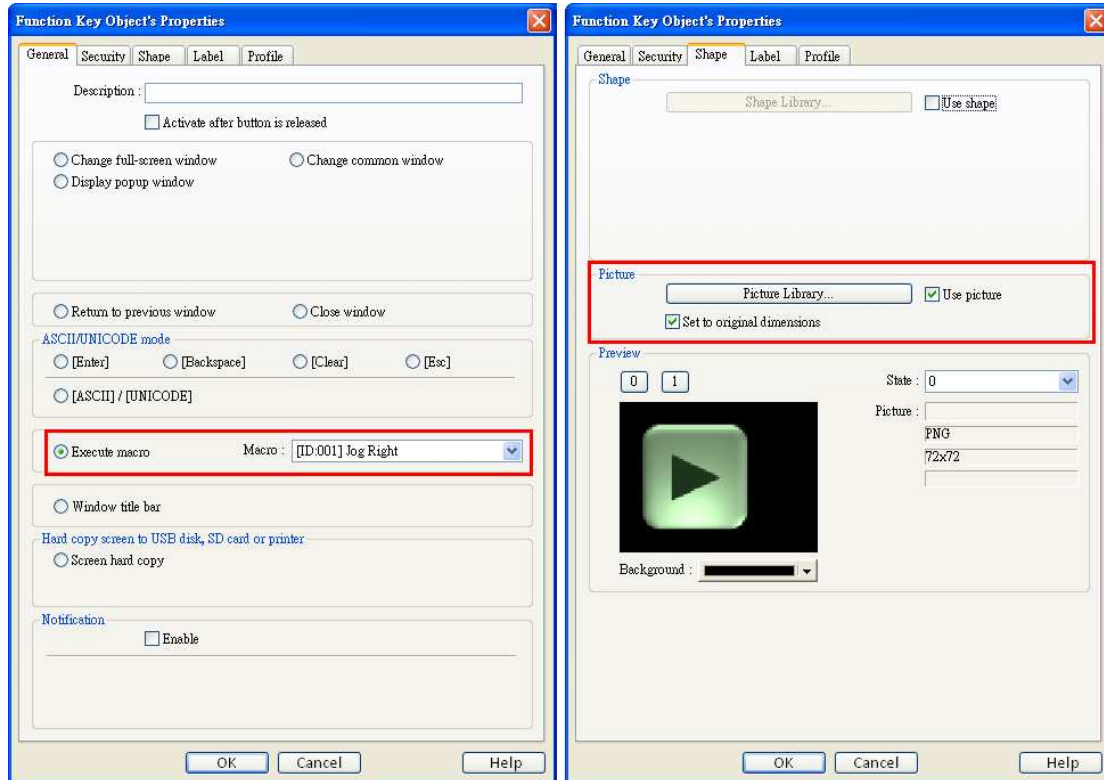

Set "LB 0" in [Use capture function]

Set before & after "1" second in [Record time]

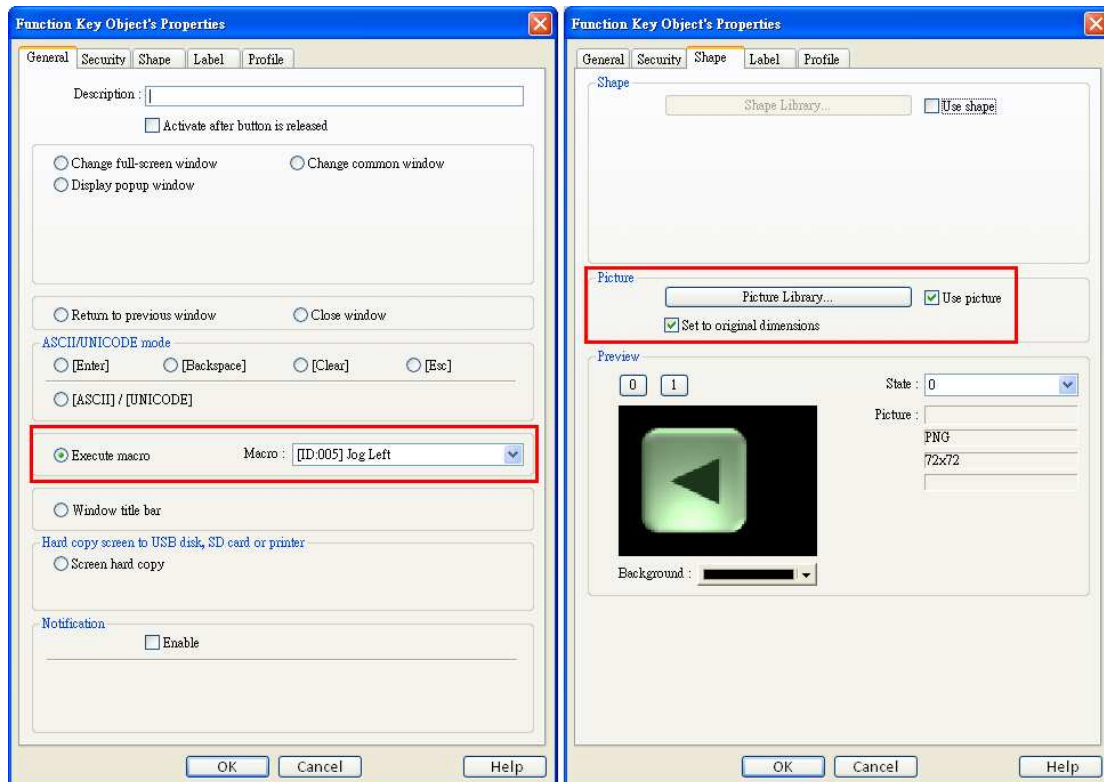

2-7 Set 4 Function Key objects for executing macro ID:001, ID:005, ID:006, ID:007

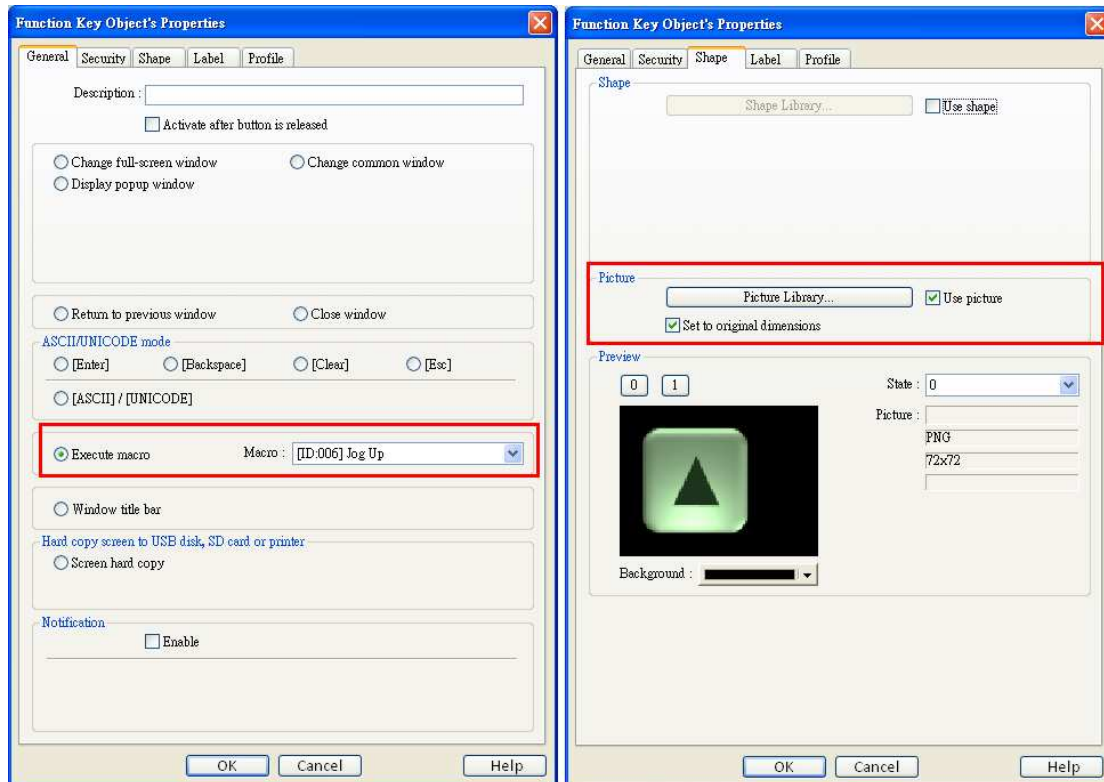

- [FK_0] The 1st Function Key, select [Execute macro ID:001] and then go to [Shape] tab to select a picture as shown below.

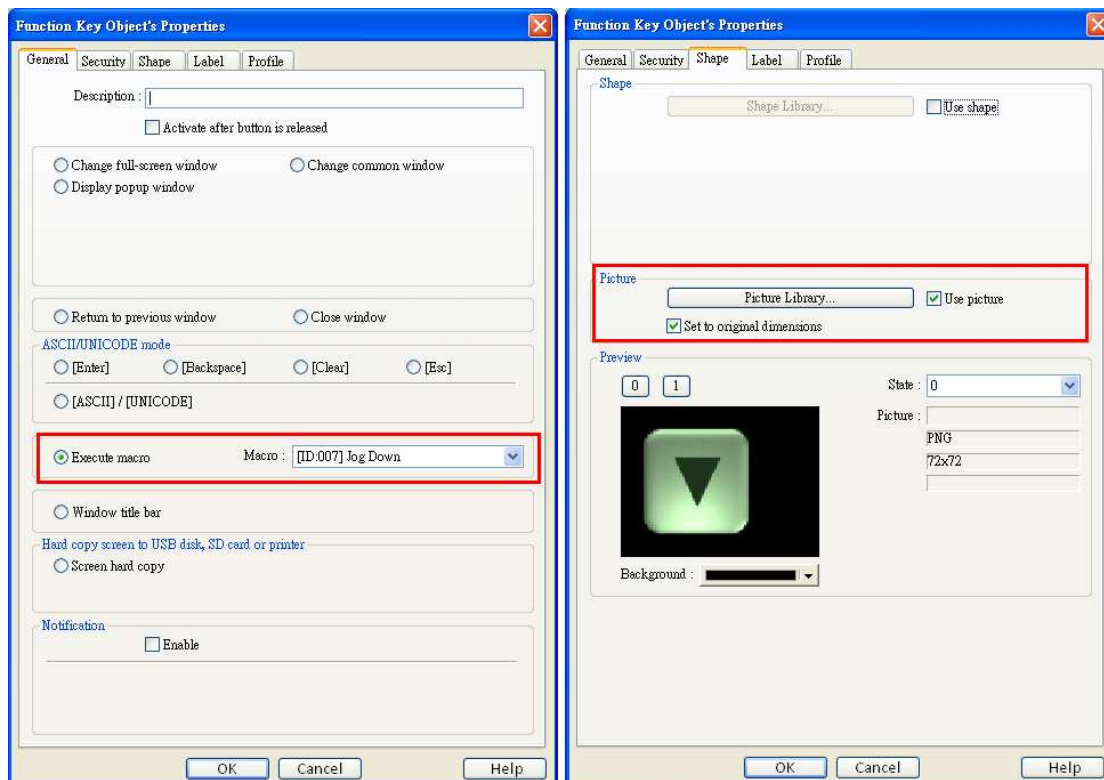

- [FK_1] The 2nd Function Key, select [Execute macro ID:005] and then go to [Shape] to select a picture as shown below.

- [FK_2] The 3rd Function Key, select [Execute macro ID:006] and then go to [Shape] to select a picture as shown below.

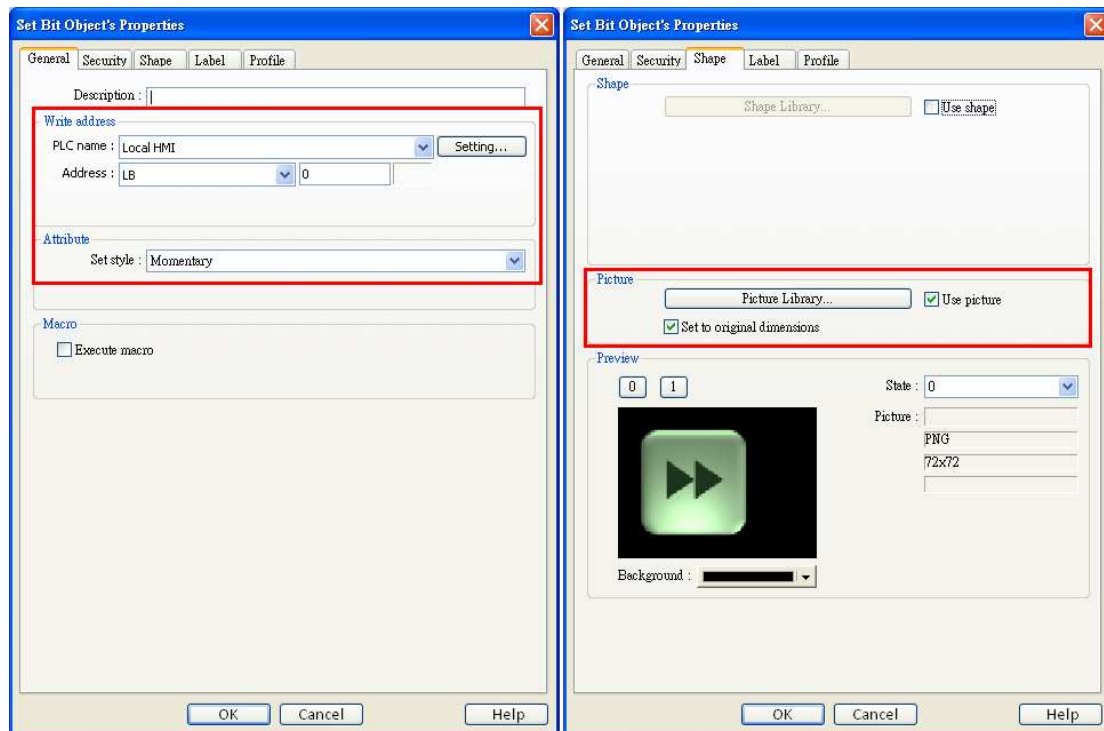

- [FK_3] The 4th Function Key, select [Execute macro ID:007] and then go to [Shape] to select a picture as shown below.

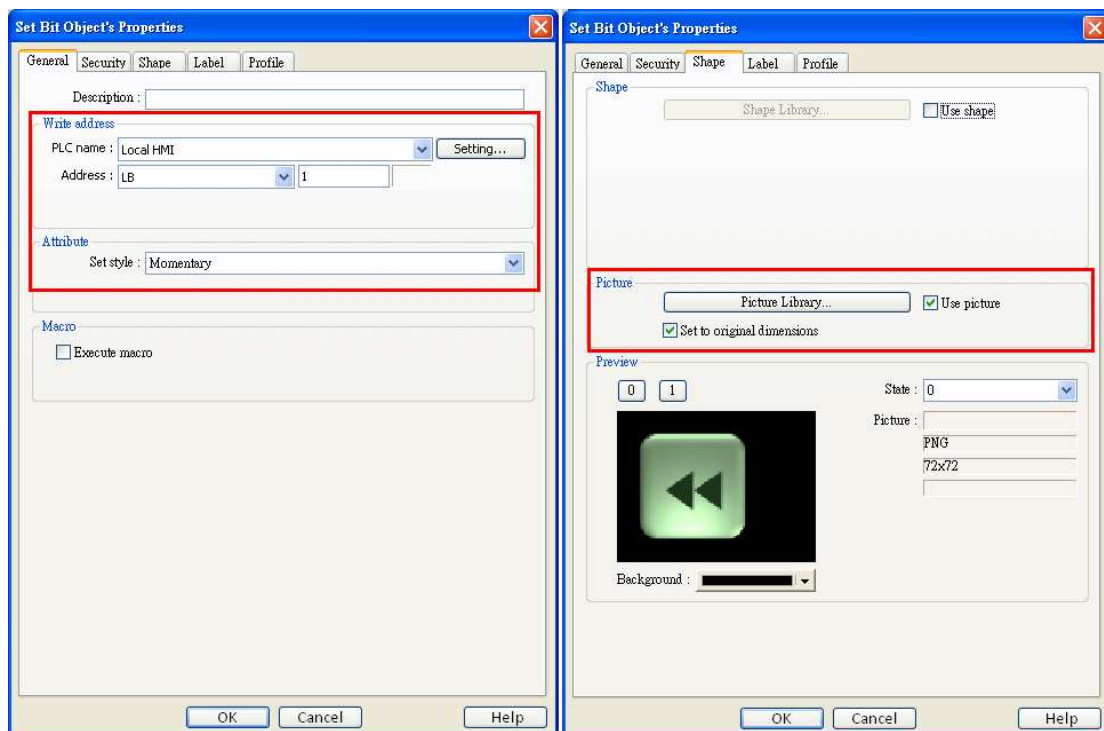

2-8 Create 14 Set Bit objects

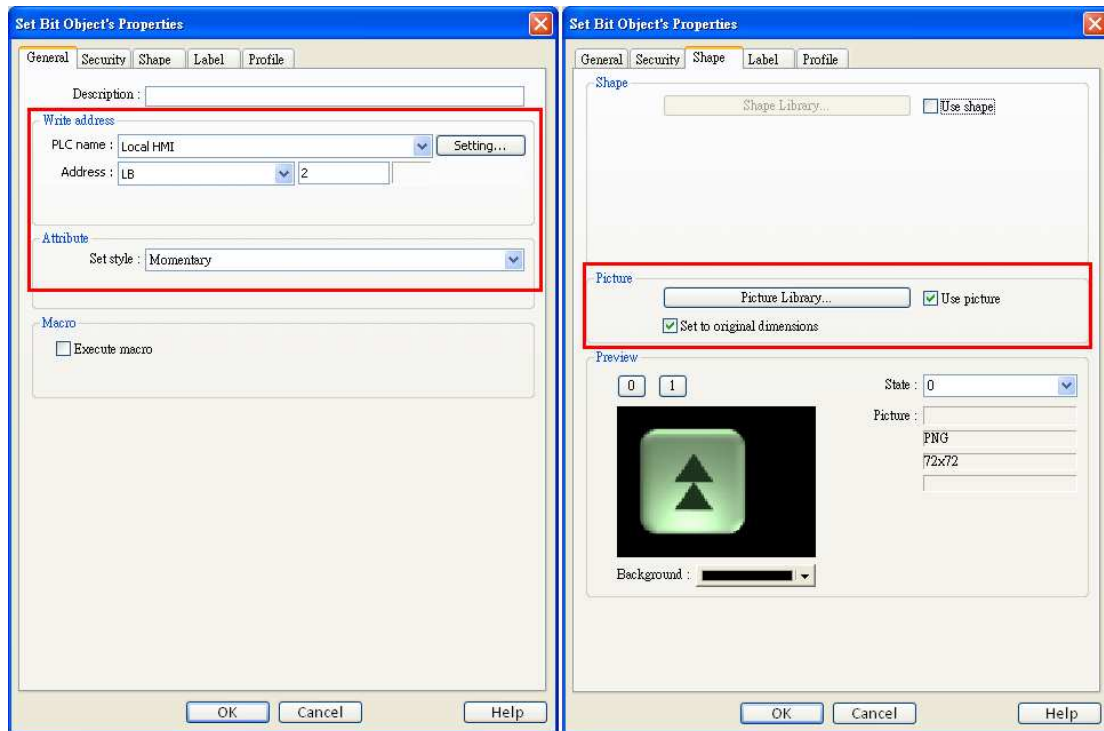

- [SB_0] The 1st Set Bit object, set LB 0 in write address and select a picture as shown below.

- [SB_1] The 2nd Set Bit object set LB 1 in write address and select a picture as shown below.

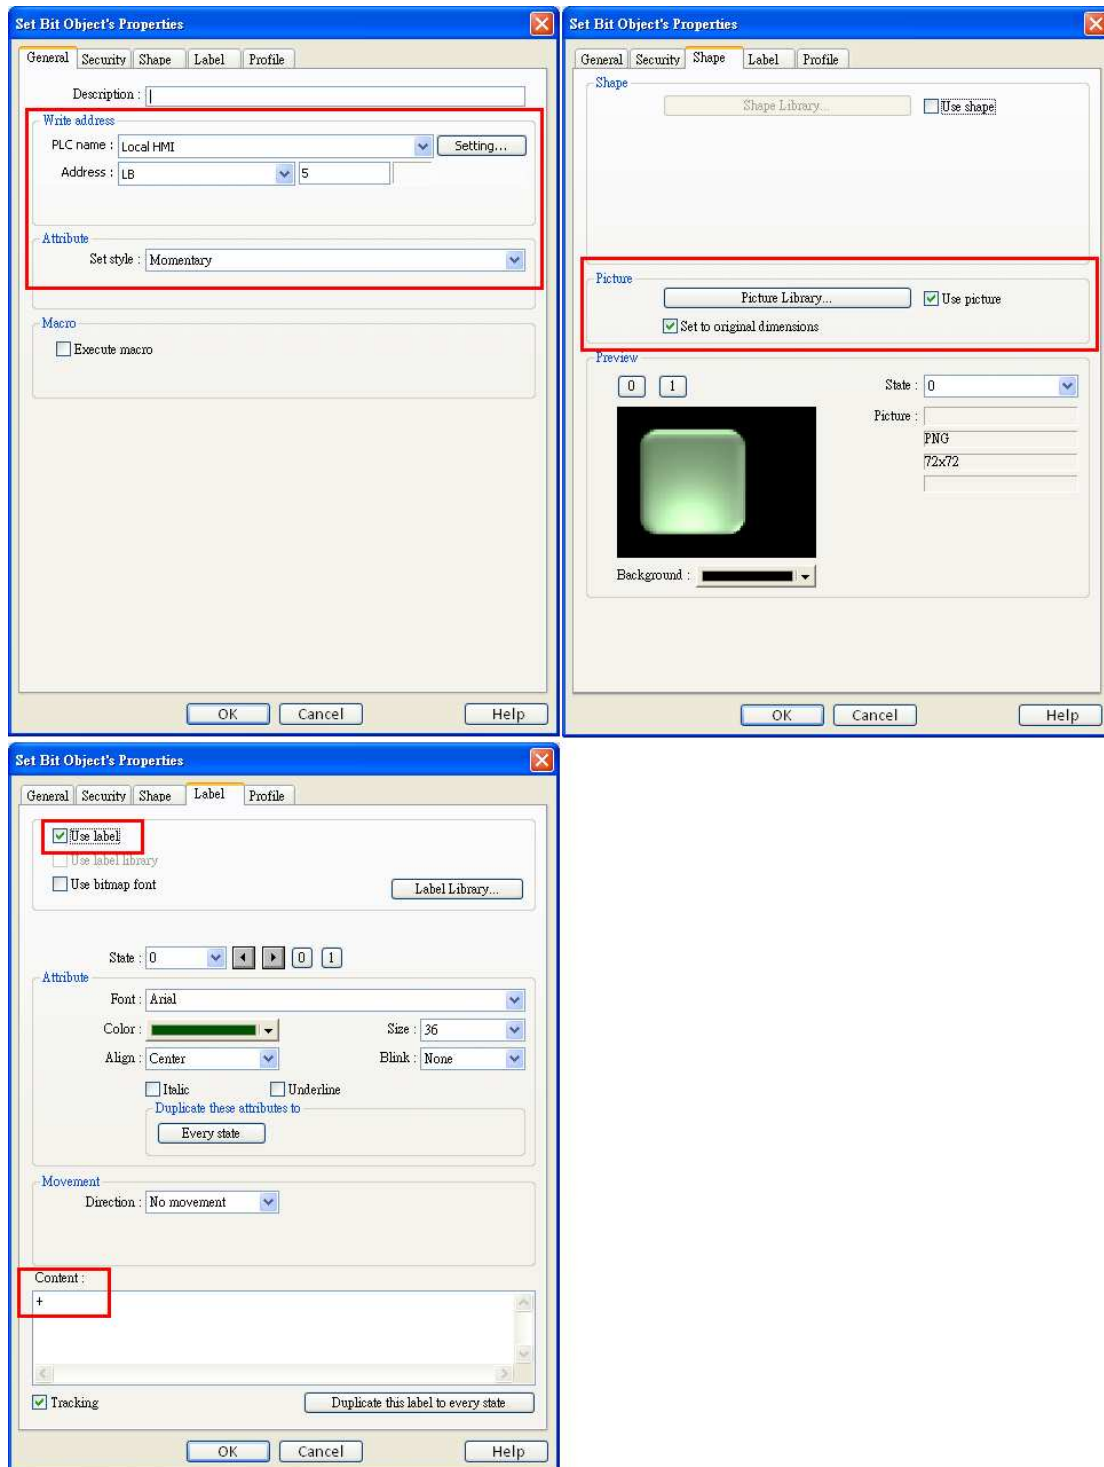

- [SB_2] The 3rd Set Bit object set LB 2 in write address and select a picture as shown below.

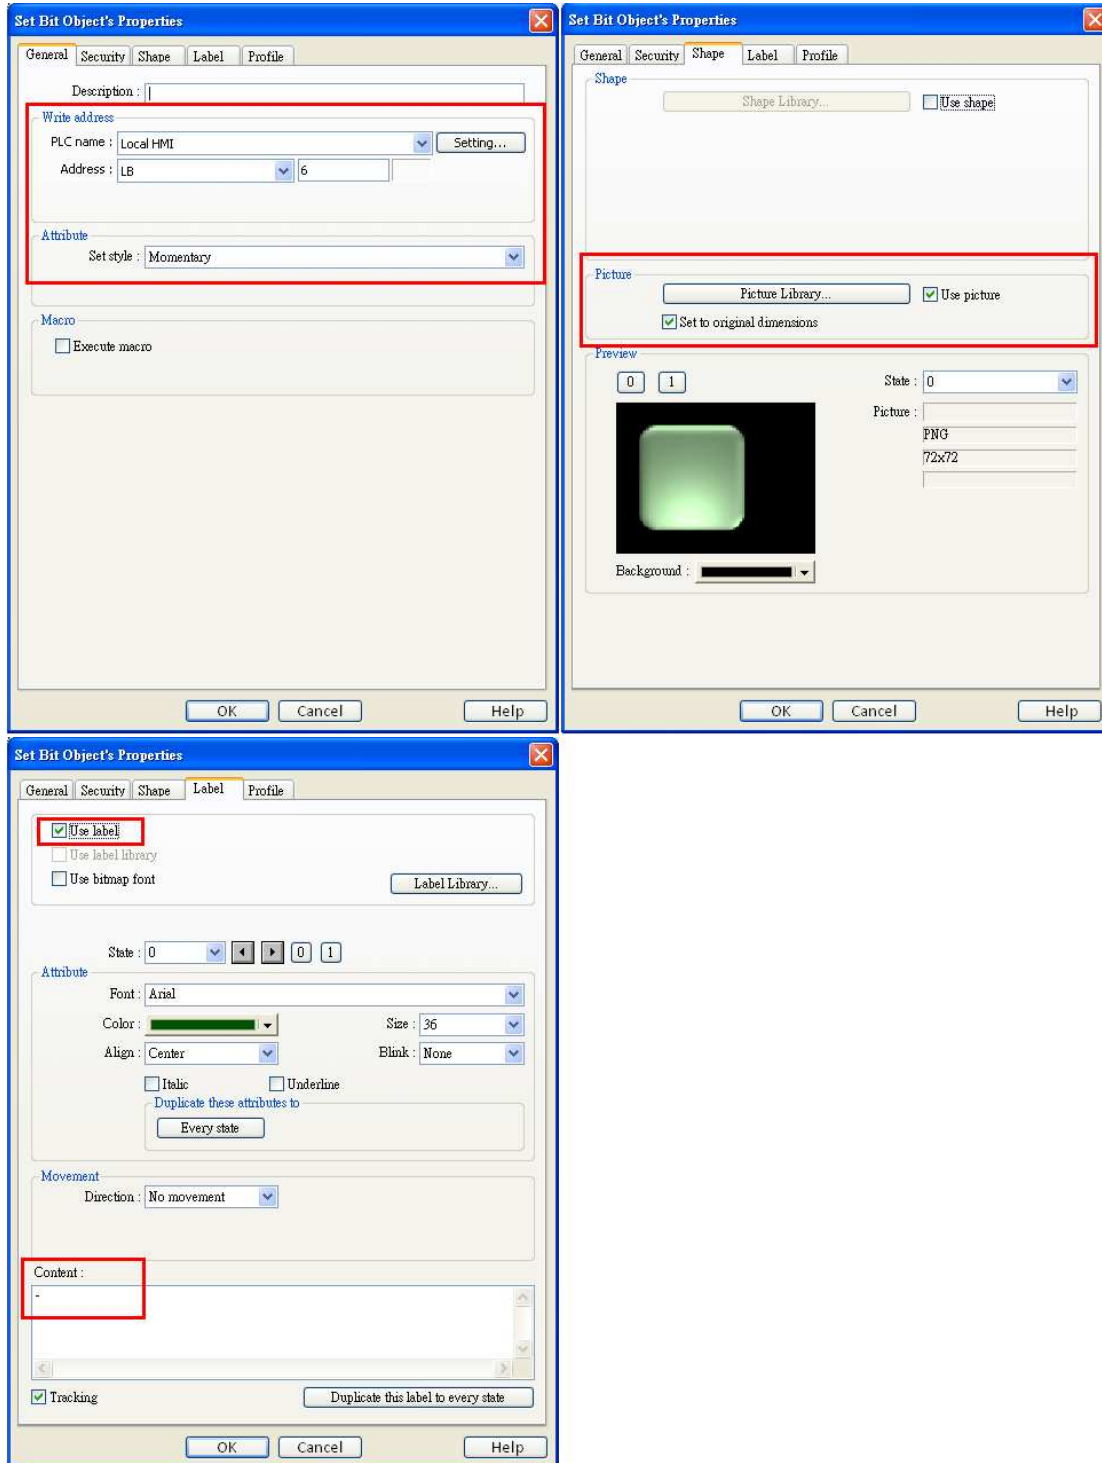

- [SB_3] The 4th Set Bit object, set LB 3 in write address and select a picture as shown below.

- [SB_4] The 5th Set Bit object, set LB 5 in write address and tick [Use label] to enable label "+" then select a picture as shown below.

- [SB_5] The 6th Set Bit object, set LB 6 in write address and tick [Use label] to enable label “-” then select a picture as shown below.

- [SB_6] The 7th Set Bit object, set LB 0 in write address.
